

## **Hongbin Wang (Victor)**

### **Statement:**

Currently serving as the secretary of ACCE 2005 office, I am now pleased to be nominated for vice president position in 2006. I have been proud to serve our small but unique organization for the last year and I want to continue to contribute as ACCE becomes more and more important in gathering friends together and passing information among oversea Chinese corrosion engineers.

Please support me and join us together to make ACCE a better platform to share information, experience, skills, as well as happiness.

### **Bio:**

After completing my PhD study at Institute for Corrosion and Multiphase Technology (ICMT) in 2001, I worked as a post-doctoral researcher at Dr. Alberto Sagues's corrosion lab for two and half years at University of South Florida. Prior to my employment with Clariant Oil Service in 2005, I worked again at ICMT for one year as a team leader and software manager, taking in charge of corrosion projects and corrosion software development.

I possess a multidisciplinary research background while specifying my study and research areas on the corrosion and materials, particularly the investigation of CO<sub>2</sub>/H<sub>2</sub>S internal pipeline corrosion for oil and gas industry applications. My knowledge, experiences, and interests include corrosion inhibitor evaluation and screening, localized corrosion, galvanic corrosion, as well as corrosion process and flow modeling. I have published 15+ journal and conference papers and made several presentations at NACE conferences.
